

# WHY CHOOSE LED BULBS?

- Longer life than incandescent bulbs
- Illuminate faster than incandescent bulbs
- At highway speeds, LED brake lights give an increased cushion of about 18ft\* because the driver behind can see the LED brake light sooner, versus incandescent bulbs.

## SYLVANIA ZEVO® LED

- **LIFETIME WARRANTY\*\***
- Super Bright SMD LEDs with high lumen output
- Excellent thermal management
- Easy-to-install

**SYLVANIA**  
**ZEVO**  
AUTOMOTIVE LED LIGHTING

\*Based on 1ms LED response time vs. 200ms incandescent response time \*\*See package for details

# WHY A LOAD EQUALIZER? LED

When upgrading traditional mini bulbs to LED, certain applications will require a Load Equalizer in order to eliminate the fast blinking or error message on the dashboard. This is due to the fact that LEDs consume a fraction of the power of the traditional bulb they replace. Some car circuits use bulb power draw as a way of detecting a functioning bulb. On these circuits, the car may erroneously “think” that the LED bulb isn’t on because it draws so much less power, resulting in a fast blink or an error message.

SYLVANIA Load Equalizers are an easy and effective solution to these problems.

- Easy to install
- Designed for proper heat management for safe operation
- Reliable construction and quality connections for long term durability
- Allows for LED bulb operation on outage detection circuits by effectively mimicking the traditional bulb power profile.
